QUALITY FOR BUILDING

## TYPE OF WORK

In southern France, in the enchanting Provence-Alpes-Côte d'Azur region, a series of renovations have been carried out using FASSACOUCHE, a one-coat coloured plaster, representing splendid examples of “architectural face lifts” in which aesthetics and technical performance blend together in perfect harmony.

Protection of the exterior façades, quick and easy application, decoration: all in one operation. Various finish effects can be obtained, depending on the type of processing desired: effect: scratched, floated, sponge-floated or smooth.

Campus of the University Law Library  
Architect: Roland CARTA / CARTA Associés  
Aix-en-Provence

Application of Fassacouche one-coat plaster directly on the building's concrete blocks.  
“Smooth” effect finish.

## FASSA BORTOLO PRODUCT

**FASSACOUCHE**  
Semi-lightweight coloured plaster for waterproofing and decorating façades

Since its origins, plaster has had the purpose of protecting substrates against physical and climatic attack, as well as providing a waterproof coating on buildings.

One-coat plaster, originally created to waterproof and decorate exterior walls, today offers a wide variety of decorative possibilities, as well as quick and easy application.

The result of the company's know-how and extensive experience in the field of premixed plasters and coloured finishes, FASSACOUCHE, a one-coat wall covering classified as OC2, thanks to its special formulation developed in the Fassa Bortolo Research Centre, has specific characteristics that make it a unique and high-quality product:

- Uniform and constant mix
- Colour-stable over time thanks to the use of inorganic pigments
- High breathability, while maintaining its water-repellent properties

With **FASSACOUCHE**, the following finishes can be obtained just a few hours after application:

*Scratched*

*Floated*

*Sponge-floated*

*Smooth*
