QUALITY FOR BUILDING

**GREEN
VOCation®**

WHAT IS INDOOR POLLUTION?

- We spend 80% of our time in indoor spaces where pollution can be up to 10 times higher than outdoors.
- Formaldehyde, an odourless and volatile gas, is a carcinogenic substance and one of the main VOCs found in the home.
- Formaldehyde can be found in carpets, fabrics, furniture, resins and glues, etc.; reducing its concentration therefore improves air quality and consequently indoor well-being.

POTHOS 003 IS THE NEW PAINT BRANDED **GREEN VOCation**

The line of finishes for interiors without VOCs, formulated using selected raw materials for a healthier and more comfortable environment.

POTHOS 003 TECHNICAL CHARACTERISTICS

Yield: approx. 5.0 to 7.0 m²/l (2 coats) for finished work

Packages: 4 and 10 litres

Class A+ in accordance with French legislation on VOC emissions.

POTHOS 003 is an innovation in the field of finish coat products: it can in fact **immediately** capture and transform the formaldehyde in the environment into stable, harmless compounds.

POTHOS 003 can be defined as a “smart”, **high-tech paint**, the result of continuous research carried out by Fassa laboratories, with a purpose that goes well beyond the simple protection and decoration of walls.

POTHOS 003 IS:

➤ Fast acting

➤ Solvent free

➤ Washable

➤ White

➤ Super flat

➤ Odourless

➤ Breathable

➤ Covering

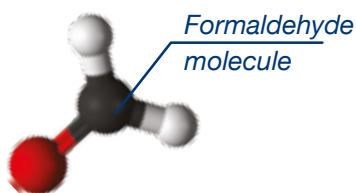

➤ High yield

but above all... **IT REDUCES INDOOR POLLUTION**

POTHOS 003, WELL-BEING ALL AROUND YOU

1 Formaldehyde is a **carcinogenic** substance found in our homes, in resins, glues, furniture, fabrics,...

3 The formaldehyde is then converted into stable, harmless compounds, **for a period** lasting around **10 years**

2 POTHOS 003, is a high-tech product that in just **24 hours** **captures** the formaldehyde present in the environment, without needing to be activated by UV rays.

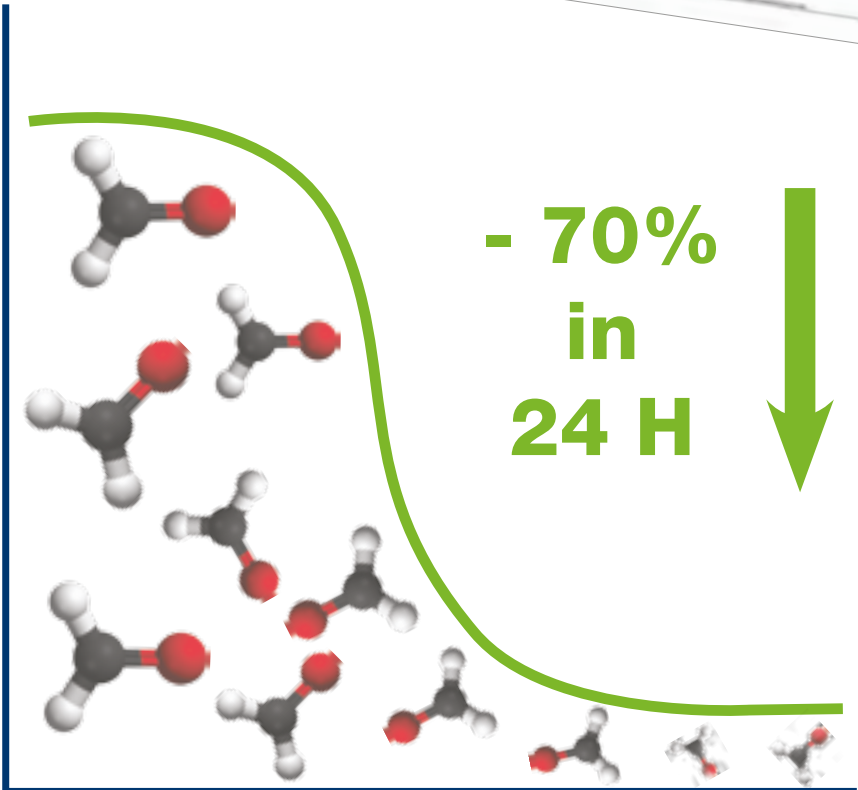

POTHOS 003 REDUCES THE AMOUNT OF FORMALDEHYDE IN THE AIR BY AT LEAST 70 % (VERIFIED FOR 10 YEARS)

Tests conducted in accordance with **ISO 16000-23** at an independent laboratory show that when surfaces are treated with POTHOS 003, free formaldehyde in the environment is **reduced by at least 70%, acting in just 24 hours**.

POTHOS 003: active 24 hours a day, every day for 10 years

The image shows a formaldehyde reduction test report from eurofins. The report includes sections for Sample Information and Test Method. The Test Method section contains a table with columns for Parameter, Result, and Unit. The results show a reduction of formaldehyde in the air by at least 70%.

| Parameter | Result | Unit |
|-----------------------------------|--------|-------|
| Formaldehyde (HCHO) concentration | 0.012 | mg/m³ |
| Formaldehyde (HCHO) concentration | 0.036 | mg/m³ |
| Reduction (%) | 70 | % |
