QUALITY FOR BUILDING

## TYPE OF WORK

Façade restoration

Work was completed to restore the exterior façades, before applying the **FASSIL R 336** coating and **FASSIL F 328** silicate primer-undercoat. The cornices and the outlines of the windows, were finished with smooth silicate paint **FASSIL P 313**. The silicate line products were also chosen for the finishes, due to their high permeability to water vapour, making them ideal for very humid environments such as Venice, and the warm tones they give the building, integrating perfectly into historic city centre.

## FASSA BORTOLO PRODUCTS

**FASSIL F 328**  
Silicate mineral primer

**FASSIL R 336**  
Silicate mineral coating with rustic finish

**FASSIL P 313**
