Gypsum is composed of calcium sulphate (CaSO4). Impurities in gypsum-based products usually involve clays, carbonates or marls, depending on where the mineral is quarried, and these may contain small concentrations of silica (amorphous or crystalline).

Gypsum-based products have a zero or very low silica content and, even if present, the quantities are so low as to not pose a significant health risk.

If dusty or powdery material may be generated when handling gypsum-based products, it is recommended to wear a mask, ensure that the workplace is well ventilated, and use protective gloves and goggles.

8.2. Exposure controls

Provide adequate ventilation. Where reasonably practicable, this should be achieved by the use of local exhaust ventilation and good general extraction.

Eye protection:

Eye glasses with side protection (EN 166).

Protection for skin:

Use suitable clothing that provides complete protection to the skin according to activity and exposure (EN 14605/EN 13982), e.g. overall, apron, safety shoes, suitable clothing.

Protection for hands:

There is no material or combination of materials for gloves that can guarantee unlimited resistance to any individual chemical or combination of chemicals.

For prolonged or repeated handling, use chemical resistant gloves.

Suitable materials for safety gloves (EN 374/EN 16523); FKM (Fluorinated rubber): thickness >= 0.4 mm; permeation time >= 480 min.; NBR (Nitril rubber): thickness >= 0.4 mm; permeation time >= 480 min.

The choice of suitable gloves does not only depend on the material, but also on other quality characteristics that vary from one manufacturer to another and on the manner and times according to which the mixture is used.

Respiratory protection:

If workers are exposed to concentrations above the exposure limit they must use appropriate, certified respirators.

Particle filter device (EN 143): mask with filter P2.

Environmental exposure controls:

See point 6.2

Hygienic and Technical measures
